

## How to achieve the best results with your GreenTek Dyna-Corers

**Important:** Regularly check over, and clean your units with a stiff brush and compressed air, (wear safety glasses)- if necessary use a low pressure water hose then dry immediately with compressed air. **DO NOT USE A PRESSURE WASHER** as this can cause premature bearing failure.

Here are our top tips, please read the operators manual for more:

- Only use when the ground is dry and firm enough to mow
- Set reel speed at 50%, increase to **maximum of 75%** if needed
- Adjust forward speed for desired hole spacings (**max 2 mph / 3 kph**)
- Only use in straight lines: cornering will cause overload and damage
- Drive forward whilst lowering and starting the units, and stop forward travel before lifting units or damage to the units or greens may occur
- Regularly check nuts and bolts are tight and tines are not damaged/worn
- Use the trolleys provided to safely move and fit the units to your mower
- Service your Dyna Corers as detailed below.

	Dyna-Corer annual service checklist
<input type="checkbox"/>	Check all bearings for wear and replace if needed
<input type="checkbox"/>	Inspect tine holder rubber mounts and replace if damaged
<input type="checkbox"/>	Check tines are tight and replace if worn or damaged
<input type="checkbox"/>	Inspect drive coupling splines for wear
<input type="checkbox"/>	Ensure slip clutch is working correctly
<input type="checkbox"/>	Check all mower mountings are fitting correctly
<input type="checkbox"/>	Check all nuts and bolts are tight
<input type="checkbox"/>	Ensure all guards are fitted and not damaged
<input type="checkbox"/>	Oil the splines in the motor coupling
<input type="checkbox"/>	Set up the working depth ready for work
